

Bunk Cushion Improvements

By Rodney Arnold, Shrimper 294 (*Morning Vicar*) (Spring 2005)

If having new bunk cushions, have them made in two parts with a join where the plywood panel covers the storage locker at the aft end of the berth. You can then access this space without moving the entire cushion and even use the square as an extra deck cushion. The join is hardly noticeable.

It has taken me 16 years to think of this.
